

# Data Hustle – Round 2

Congratulations!!!

You are now qualified to Round-2

The one last hurdle to get an entry to the final round at Masters' Union School of Business

Refer to the excel file shared. It consists of two sheets – data dictionary and data

1. data dictionary – Helps you understand what each column represents in the dataset
2. data – Data to be used for the analysis

Your final submission can be in the form of an Excel/ Power BI/ Tableau dashboards/Microsoft Powerpoint. **But note that you can only submit one file.** Use tool of your choice to do the analysis (R/ Python/ Excel)

There is no limitation to number of slides/sheets/dashboards. Note that more slides doesn't necessarily mean higher score. We would rather be looking at the process followed and the insights generated from the dataset.

Below is the evaluation criteria:

1. Mention the data cleaning/manipulation/imputation steps followed.
2. Find out the top-10 insights from the data. Every insight should be backed by charts/visuals
3. Bonus points if you can create a story through a dashboard on Excel/Power BI/Tableau. In this case, highlight your point-1 and point-2 also in the same dashboard. You can use multiple sheets in the same dashboard.

Make assumptions if required and do highlight the assumptions in the final submission (if any)
